## MEETINGS HELD DURING REPORTING PERIOD

International  
Hydrographic  
Organization

The S-101 Project Team has met once during the reporting period.

1. S-101 PT6 Feb 2021, Remote Meeting

<https://iho.int/en/s-101pt6-2021>

- A further remote meeting is planned in May 2021. The option of a physical meeting later in the year meeting alongside the ENCWG (Nov 2021) is being explored but will need to be reviewed based on the global situation later in 2021

# PROGRESS DURING THE PERIOD

International  
Hydrographic  
Organization

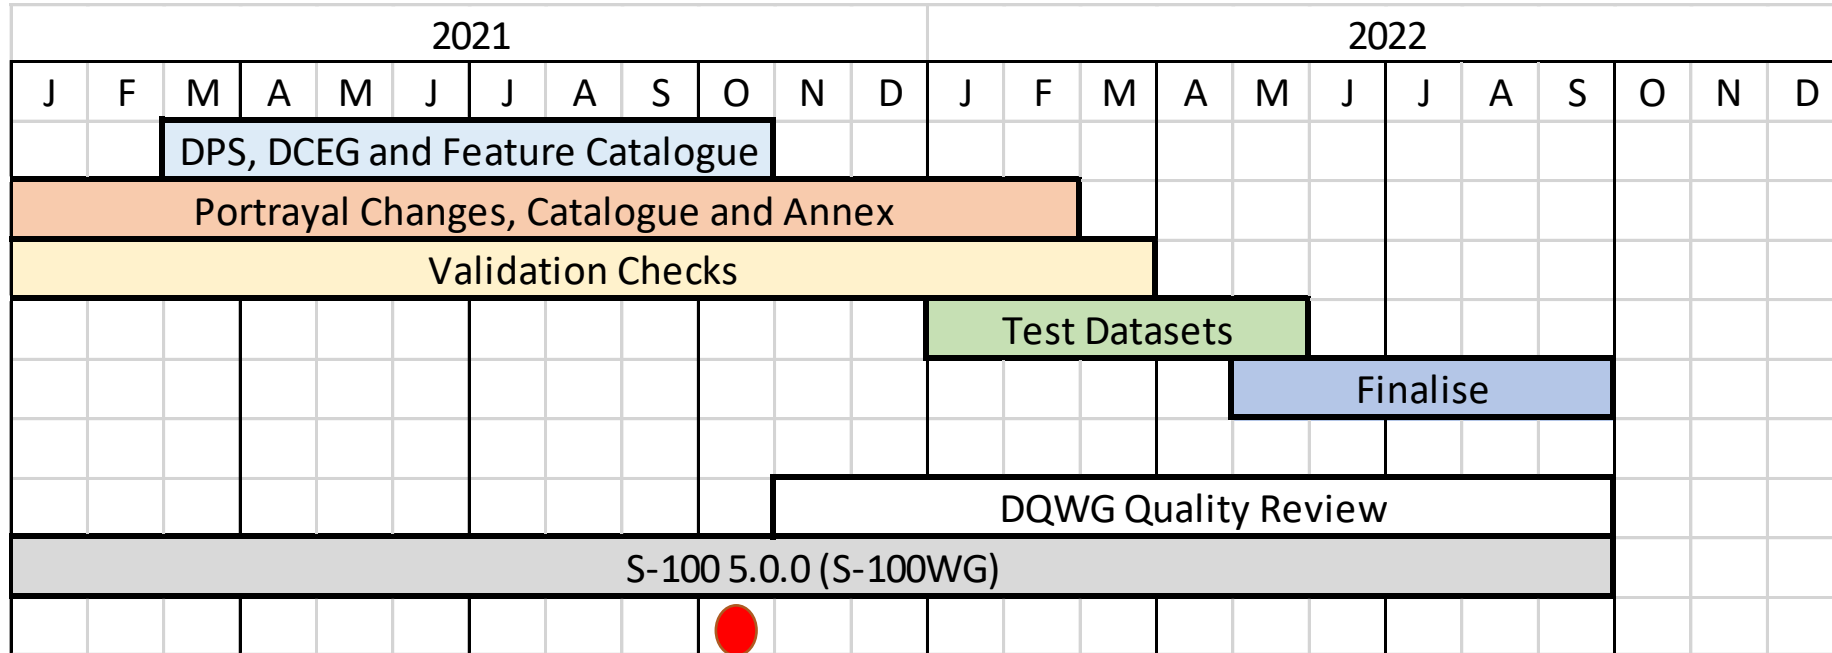

- Good progress has been made across 3 supporting sub groups as follows;
- **DCEG** – An interim DCEG 1.0.1 has been prepared resolving inconsistencies and including updated content for the quality of bathymetric data reflecting DQWG input and supporting further test and development in this important area
- **Portrayal** – Good discussions have been progressed and a number of proposals agreed, a table of specific symbology changes for S-101 has been developed along with a log of ECDIS performance aspects that need to be addressed.
- **Validation Checks** – An initial draft set of S-101 validation checks have been prepared, this will now be reviewed, further work progressed when component elements of S-101 1.1.0 are more mature.

# OUTLINE WORKPLAN

International Hydrographic Organization

- This graphic shows the detailed workplan to deliver S-101 1.1.0 as 5 “themes”
- Note the timeframes for S-100 5.0.0 and planned DQWG review, the red dot indicates the final submission date for S-100 5.0.0 changes

# CHALLENGES

International  
Hydrographic  
Organization

- Although positive progress is being made this remains reliant on limited resources of active contributors, currently it is considered capacity is sufficient to deliver S-101 1.1.0 but additional testing and outreach will require additional resources
- It is important that a clear understanding of the Dual Fuel concept is reached to allow S-101 to prepare a robust S-101 1.1.0 to support test and development activities
- S-100 5.0.0 is a critical dependency for S-101 1.1.0 and the associated risk should be reviewed by HSSC
- The S-101 Value Added Roadmap contains a Risk Register and S-101PT is working with the HSSC to apply the ISO 9001 principles to this work (see [HSSC13-05.5B](#))

IHO

**TO NOTE**

International  
Hydrographic  
Organization

- The project team continues to liaise with various Working Groups and Project Teams
- The Value Added Roadmap for S-101 is being updated
- Test Datasets will be important to the success of S-101 and the request from the S-100 WG for funding will support S-101
- Testbeds will form an important part of the testing and implementation of S-101, it is planned to develop material to guide these activities (with regards to S-101)
- Discussions have begun on a potential Outreach sub group to coordinate engagement with wider stakeholders (the recent CIRM workshop highlighted the need to form a strategy of how we engage with end users and other stakeholders)

# **OUTCOMES**

International  
Hydrographic  
Organization

- The HSSC is invited to:
  - a. endorse the work plan presented at annex A
