Different data acquisition program for different maritime basin

Conclusions for the next steps

- “In conclusion, for the partnership, as an integrated maritime policy needs an integrated vision, the priority is to achieve the coverage of the whole coastal zone. That is the reason why the coastal mapping project proposes a European Strategy with **3 axis** taking into account the needs of organizing common campaigns of acquisition of data, the opportunity represented by the different European financial programmes and the crowd sourced acquisitions of data done by the maritime community”

Strategy 3 axis

- Initiative EOOS for common acquisition tools
- CRPM, IENWG with work programmes
- Crowd sourcing bathymetry with HO guidelines

MERCI !
